

Amendments to the Specification:

Please replace the paragraph beginning on page 6, line 24 with the following amended paragraph:

In the invention it is preferable that when data is not provided because of busyness or the like as calling results of a request ~~rerequest~~ of data, recalling is repeatedly performed with predetermined timing.

Please replace the paragraph beginning on page 7, line 3 with the following amended paragraph:

In accordance with the invention, when the request ~~rerequest~~ of data is called and data cannot be received because of busyness of a line, the recalling is automatically repeatedly performed so that it is not necessary to manually perform the recalling.

Please replace the paragraph beginning on page 16, line 12 with the following amended paragraph:

Each of the above connecting methods is merely an example of a configuration in which the I-fax is connected to the Internet 211. Accordingly, a connection of the I-fax of the invention to the Internet 211 is not restricted to the above examples ~~example~~.

Please replace the paragraph beginning on page 23, line 25 with the following amended paragraph:

In the above-explained embodiments, as a communication apparatus for printing data being received via the Internet 211 on recording paper, facsimile apparatus that is accessible to the Internet 212 via the server computer 212 administered by the ISP 216 and the public line network is explained. However, the invention is not restricted to the facsimile apparatus of the embodiments, but can also be applied to a facsimile apparatus connected to the server computer 24 using the LAN 28 or directly connected to the server computer 24 using a cable. Further, it may be needless ~~needles~~ to say, but the invention
